ARC REFERENCE

Alpha-104 “Spider”

ARC-2727/121 “Maroon”

Usage

ARC Troopers are best used as a Supporting element to RC as they lack the shielding that makes RC great for CQC. They can be used in a plethora of ways however as they specialize in being “Jacks of all Trades”. Having access to Demo Perms by default all ARCs are capable of Defusal and Planting Explosives. The Squad Leader and Squad Medic have access to Medical perms on top of Demo Perms meaning these 2 members are also able to perform adv Medical functions. Along with the above, ARCs also have access to a couple of unique equipment that makes them well suited to just about everything.

Weapons and Equipment

Some of the Unique equipment that ARCs have access to is the MM9 Wrist rocket system, NT-242, and Verpine Shatter Rifle. Here’s a list of the most prevalent unique assets

Equipment	Description	Ammo Types
Westar M5	The M5 Westar is the Main Primary of ARC Troopers. It does decent long range and short range damage, and is comparable to the DC-17M and HighPower DCs in terms of damage.	60rnd Energy Cell
MM9 Wrist Rocket System	The MM9 Wrist Rocket is capable of firing 5-6 different rockets. It is linked to the Backpack system of the ARC Backpack and is by default loaded with an HE Rocket. The rocket system is locked on using your default lock key and is launched from your waist. From launch it will travel about 10-15 meters forward then start tracking.	High Explosive
		ION
		Stun
		EMP
		Smoke
NT-242	The NT-242 or NT for short is a 15 round Anti-Material Rifle that has 4 different types of Rounds. The Precision, HE, EMP, and AP. The Precision has no HE effect and flies mostly straight. HE obviously	15rnd Precision
		1rnd HE

	explodes on impact. EMP permanently disables non Electronically Shielded droids. AP takes about 2-3 Shots to kill a Blue AAT and One to Two for a GAT.	1rnd AP
		1rnd EMP
Verpine Shatter Rifle	The Verpine Shatter Rifle is one of the main weapons that the ARCs have at their disposal in terms of uniqueness. It has lots of options in terms of use case. You can use it as a normal sniper, as an HE Slinger, Long Range Droid Stun Gun, Drug Launcher, or even as a Tracking rifle. The main things we will look at here are the less used rounds. ION Flechette acts as a long range version of your standard ION rounds, it is a physical round like all Verpine rounds however will cause droids to fall over and drop weapons. Acid Flechette will disintegrate bodies on a kill. Finally the Tracking FOB will update its location on your Map based on a few second timer.	20rnd Flechette
		20rnd ION Flechette
		1rnd Acid Flechette
		1rnd APDS
		1rnd Deraformine
		1rnd Latheniol
		1rnd Tracking FOB
DLT-19X	The DLT-19X is a Sniper that isn't quite specific as Field Support has access to it however its unique in the fact of it has access to the Rail Cell. The Rail Cell like the Causality will disable Vehicle Turrets for 10 Seconds while also having a Mild HE Effect. This Makes it useful for Disabling/Destroying Vehicles before they can shoot at you or your teammates	20rnd Energy Cell
		1rnd Rail Cell
Heavy RPS 6	The Heavy RPS 6 is the main AT of ARC Troopers. It's wire guided and locked on meaning you can just send it at what you're looking at and guide it or lock on to something with a Thermal Signature to have it guide itself. This can only be done with the AT, the AA Rocket requires a lock on to track.	AT Rocket
		AA Rocket
EPL-2 EMP Launcher	The EPL-2 is a specialized EMP launcher capable of clearing groups of non-organic enemies in quick succession. The 2-round launcher has the ability to cover long distances with its high velocity round before detonation at the intended target.	2rnd Magazine
