TRAINING NOTES

CC-6221/54 “Scorch”

CC-1452/62 “Rat”

CC-5130/76 “Noble”

RC-1322/90 “Miller”

Demolitions

The following are notes for people to remember for all the trainings that a trainee will take while they are in SOB.

- **Equipment**

Equipment

AFD- Has extended range (5km) advanced triggers (Timer, proxy sensor, IR sensor, Tripwire)

Marker Flags

Blue flags= safe area, red= danger. Use blue flags to make a corridor to allow people to walk through rather than just a line, this allows people to have some margin of error without them dying.

Defusal kit

Nacht 10 Yellow Smoke Grenade- Use this to visually mark a demo target to ensure that everyone was both verbally and visually warned of the danger.

Explosives

Det pack- Standard explosive

Magnetic Explosive Device- Det pack but throwable and can be shot out of guns like the UGL

Throwable Charge- Big, heavy, throwable explosive double the MED and Det pack in firepower.

EC-01- Very similar to the det pack but very effective against targets like armour.

DP-3 - Big commando boom, will kill MTTs

APERS Mine Dispenser- Dispenses mines in a given area

M4A1 Slam- Directional explosive good for mine clearing while somewhat effective against light vehicles and infantry

M18A1 Claymore- Bigger brother to slam and much more effective on infantry and very good at mine clearing

Both the Slam and Claymore have a killzone up to 100 metres forward with the claymore having one extending in a 45° cone

VS-50 APERS Mine- Standard mine

HX- Anti Tank Mine- Pressure plate mine very effective against tanks

APERS Tripwire MIne (PMR-3)- Standard Mine but attached to a string

- **Marker Flags**

Blue flags are used to mark safe areas, while red flags are used to mark hazardous areas. Align blue flags in a
corridor to indicate where troopers can safely travel.

Nacht-10 Yellow Smoke Grenades are used to visually mark a demolitions target to ensure that everyone is
verbally or visually warned of the danger.

- **Explosives**

Det Pack - Standard explosive used for base demolitions.
Magnetic Explosive Device - A det pack that is throwable or which can be launched from guns like a UGL.
Throwable Charge - A large, heavy throwable explosive which doubles the MED or det pack in power.
EC-01 - Very similar to the det pack, but especially effective against armoured targets.
DP-3 - An especially powerful explosive, capable of destroying MTTs.
APERS Mine Dispenser - Launches a cluster of mines in the directed area.
M4A1 Slam - Directional explosive effective at mine clearing, and somewhat effective against light vehicles and infantry.

- **Recon Training Notes**

➢ **Navigation**
➢ Triangulation- Use different reference points to get current position. To obtain a “retrograde” bearing to the target take your bearing and add/subtract 180 to get the reverse. Draw a line from both the reference point and the “retrograde” bearing to get a rough idea of where you are. If you have two reference points and those lines cross, you have found your position
➢ Land Nav- Use a route that subdivides the distance into several smaller parts using waypoints to mark various stages.
➢ **Stealth**- Key for recon units

- **Prowler 500- Recon Drone.** Setup, operates on UAV terminal, can be deployed and repacked, needs UAV batteries, fragile should be kept at a high altitude, can remotely mark targets with a laser.
- Manual Prowler Controls- Shift - increase altitude, Z - Decrease altitude, WASD - Lean in given direction, Q&E - Turn horizontally, X - Auto hover
- Autonomous controls - Shift+left click to bring up movement, to give multiple orders CTRL+right click. Right click on the arrow to display types of control. Type- Drone move orders, Behaviour - how drone behaves, Altitude- what height drone will move to

- **Assault Training Notes**

- **Equipment**
- DP-23 Shotgun - Shotgun with both Slug and buckshot (Slug for longer range, buckshot for CQC)
- Personal Shield - Temporary shield that protects users from the direction their weapon is facing.
- Lockpick - unlocks doors (Fast lock pick faster but more likely to fail and break lock pick, slow lock pick slower but more likely to succeed)
- Axe - as it is at the moment recommend to not use it
- DB-90 Breaching Charge - Blows open any door (not FOB doors/gates)
- Sonic Detonators - Non-lethal flashbag however it does hurt if you are hit by it
- **Doorways** - Called Fatal Funnels for a reason, don't get stuck in them
- When a floor has been cleared use blue spray paint on a highly visible spot on the ground to mark it clear while to mark a building clear mark one of the exterior walls (paradropped troops can regarrison previously cleared building).
- **HVTs** - Ions for droids, stuns for humanoids

- **Adv Medical Notes**

- **Equipment**
- RFX/K Medisensor - Establishes patients vitals, used on chest, takes 10 seconds to use
- Field Defib Unit - Can instantly reestablish a patient's heart rate, causes significant pain
- Bacta patch - Good for healing a severely damaged limb, bulky and has a long application time
- Bacta Spray - Good for healing minor wounds, ineffective at any medium wounds but it is small and has a fast application time
- Stretcher - Put critically wound patients on this to prevent them from bleeding out
- **Custom medications**
- Batrox - Slows the bleeding of a patient
- Deraformine - Knocks a patient out after 10 seconds
- Latheniol - Euthanization drug, kills patient after 60 seconds and knocks them out after 30 seconds, can only be used after Field support or a CO has given permission, should be only used as last resort

- ➢ Nevastrin-8 - dangerously increases a patient's heart rate the more it is used, lethally incompatible with morphine, use Medi Sensor before use
- ➢ PBA - Fondly referred to as "Commando Crack". Single use - increased pain tolerance, movement speed, heart rate. Double Dose - PBA Overdrive - Increases the aggression of a person and during the short time a patient cannot bleed out but the time is very short and will result in cardiac arrest
- ➢ Vutalamine - Greatly reduces weapon sway, moderately reduces heart rate and movement speed
- ➢ Medic Frequency - SR 425
- ➢ Blood loss - Be sure to keep a patient's blood volume above fatal or above 3000mL
- ➢ Reorient (use advanced treatment on the head)- To reorient a person they must be at lost some blood (5100-6000mL) and they must have a heart rate

- **Adv Insertions Training Notes**

- ➢ **Equipment**
- ➢ JT-12 - jetpack that can be bound in configure addons under NSM Jetpack mod, unbind other jetpack mod(s) that may be present because they are unused.
- ➢ 2 types of jumps - long and short. Long jump increases height and distance and short jump is directional and doesn't go very far
- ➢ Hawkbat parachute - Parachute that can only be used in freefall, should only be opened ~200 metres above the DZ/ground
- ➢ **Insert methods**
- ➢ HALO - High Altitude Low Opening - Done directly above a drop zone at about 2km, use short jump before hitting the ground (cancels fall damage)
- ➢ HAHO - High Altitude High Opening - Done at a drop point that is far from a drop zone. Altitude will be 2x the distance that needs to be covered. Ex. if you are going 3kms you will drop at 6kms. Use long jump as much as possible and avoid excessive use of a and d to orient yourself, excessive use can lead to a fatal spiral
- ➢ Hot drop - Done over a target at impulse speed at an altitude >100 metres Pilot will give green light (troopers leave LAAT) and red light (troopers stay in LAAT) use a short jump to cancel all momentum.
- ➢ Rappelling - Done via fast rope system in LAAT ~40 metres off the ground
- ➢ Jump Master is a CO/SL for HAHO, HALO, and Rappels while Pilots are jump masters during hot drops

This concludes the section of 'core trainings' that a trooper in SOB will complete. The next section will summarise the 'special/optional trainings" *offered* in SOB.

Optional/Specialty trainings (Commando, ARC, Assassin, FS, Pilot, RTO, SL, PLT, Tech)

- **Commando Training Notes**

- ➢ **Equipment** (binds are found within MokTech Industries Core)
- ➢ **Suit Systems**

- TRX-200 Mine Detector - Mine detector directly integrated into the Commando armour, improved TRX-12 with increased radius (demo only)
- ST-91 Wrist Stun Device - Taser that works up to 5 metres, must look at target to use
- Deflector shield - Shield that blocks some damage but will not absorb all damage, does not protect from fall damage
- **Helmet Systems**
- Intercom - SR but within the RC's helmet, effective up to 200 metres and disables helmet speakers which doesn't allow for RC's to communicate to other troopers while intercom is turned on.
- Low Light mode - Will greatly increase visibility without having to turn on NVGs provided there is enough light
- **HUD Systems**
- Status Panel and Team panel
- **Backpack Systems**
- Emergency Beacon
- Medics - Squad shields, absorbs all blaster fire but explosions can go through shield, lasts 4 minutes, and you can shoot out of the shield but not in
- Demos - Mine Dispenser, backpack shoots mines out of the *BACKPACK* in a 60° area
- CQC Specialist - Caltrop dispenser, works same as demo but deploys caltrops
- **Other Equipment**
- Wristblade very deadly, kills everything you love at a close range in a wide arc
- CTAB - better MicroDagr
- **Weapons**
- DC-17m - 3 different modes 60rn standard ammo, 5rn sniper ammo, 1rn anti-mat (good against vehicles and armoured targets)
- DC-15s - Recharging pistol
- **Advanced Weapons**
- One of each weapon (can have multiple adv weapons for example a plt can have a plx and chaingun)
- PLX - RPS-6 but on copious amounts of steroids, can kill targets at great range, wire guided, self-contained (no backblast), can lock onto thermal signatures, can kill air targets
- Chain gun - Z-6 but shoulder mounted with 600rn drum mags
- Heavy Repeater - Z-6 on a tripod that can be zeroed in on a target with 1000rn mags, acts as a vehicle (people on the turret can only hear via radio)
- Exotic weapons
- Flamethrower and Bowcaster limited to one per plt
- Includes all the same exotic weapons as ARCs excluding the Verpine and EPL-2 EMP launcher
- Commando tactics - Work as a squad and use your brain

- **Assassin Training Notes**

- **Equipment**
- Drone - Known as the ADRIAN drone, is used for reconnaissance as it has flight capabilities. The drone should be set to 500 metres high to give it a balance of avoiding detection and visibility on the target. Assembling the drone requires a drone battery and upon placement of the drone requires the battery to be inserted. You also need a UAV terminal to control the drone and give it commands. Commands are done via ACE interact / ACE self interact. The drone carries a stealth system and to use it set the drone up and do ACE INTERACT and enable it through there.

- DP-23 Shotgun - A standard shotgun best used in CQB environments.
- DC-19SC - A stealth carbine capable of using STEALTH rounds which do not alert enemies nearby once fired.
- DC-15X - Sniper rifle able to use the following rounds, standard, tranquiliser darts, Latheniol heart attack rounds, stealth rounds.
- DC-19s - A rechargeable pistol that is reliable for close - medium range.
- DC-19LE - Marksman rifle able to use stealth shot.
- NT-242 HEAVY RIFLE - Anti vehicle, armour, emplacement rife. Single shot with 2 types of ammo, HE and AP, HE can be used for anti infantry and other targets relating to lightly/ no armour. AP revolves around the use of armour. Tanks, cars and emplacements.
- Blades - Used for duelling other melee units and collaboration take downs on B2
- **Playstyle**
- Use your brain
- Kill priority targets that impact the team and or mission first (tanks and other such)
- Coordination is key
- Being spotted isn't game over, rely on the camouflage and relocate.
- Evade patrols and other obstacles is a option

- **ARC Training notes**

- **Equipment**
- ST-91 Stun Device - Temporarily incapacitated targets, use ST-91 Cartridge to reload it via ACE self interact
- MM9 Wrist Rocket - Useful for anti tank and other ammunition to support it. HE, STUN, Ion, EMP, Smokes. Configurable keybinds done via Mokktech controls. Do NOT fire in close proximity
- Squad Leader Beacon - Squad leads use this when their squad is in danger of dying.
- DC-17s Dual Pistols - Used in both single and double mode. Duel allows for a greater mag along with suppression power but removes the more accurate ADS. It does have a ADS but rather a ball of where predicted shots would land. Unable to use STUN or ION.
- Single mode is for greater accuracy and range, both semi or full auto firing modes. Allows for holo sights as well as stun and ion rounds.
- RPS Heavy Projectile - AA and AT capabilities, lock on mechanism with DIRECT top down fire modes.
- RD-4 Grenade Launcher - Fire standard and radiation rounds, both devastating. Can be fired in rapid fire.
- Verpine Shatter Rifle - Silent, Effective up to 1.5 km, Multiple munitions (Flechette, Ion, acid, deraformine, lathanol, tracking, 5rnd APDS. Does come with a scope that calculates the range and other info. HAS BULLET DROP
- Bowcaster - Both single and heavy rounds, heavy rounds fire a explosive round that has AOE abilities.
- EPL-2 EMP launcher - Used against droids to disable them. If friendly fire occurs THEY SHUT OFF RADIOs ON FRIENDLY
- Scatter Gun - Shotgun

- ACP repeater - Close quarters combat, high rate of fire, only use in QCQ. HIGH RECOIL.
- LS-150 Heavy Repeater - Suppression weapon, not very accurate. NO SIGHT fire from THE HIP.
- ZH-73 - Same range as DC-15a and fully automatic like the DC-15s. Mid-long range is its main work load. Hard hitting
- RSKF-44 Pistol - High powered 8 round blaster that kills lightly armoured enemies with one shot. Best used for short to medium range. DAMAGE DROPOFF DOES APPLY.
- **Tactics**
- Arc troopers act more independently then other elements due to their versatility
- Follow the buddy system
- Buddy teams are used to execute flanks and other strategies.
- Adapt quickly to changing scenarios, able to move quickly to respond to certain situations.
- ARC Troopers are less armoured then other units, this means they utilise recon and PLANNING.
- Following tactics commonly used, Alternative bounding, Successive bounding, PEELING.
- ARC kits are made for versatility

- **Field Support Training**

- **Builder/Engineer Building** - can use the fortification tool to build any of the available options provided the correct boxes are available.
- **Build options**
- Small fortifications, Medium fortifications, Large fortifications, FOB structures, BARC box (deploys 3 BARC speeders)
- **Medic** - Way more advanced than standard P2 medics and have equipment to help mascases
- **Vehicles**
- TX-130
- Juggernauts
- RTT
- BARC speeders
- AT-TEs
- UT-ATs
- AV-7

- **Pilot Training Notes**

- Test and Exercises
- For more info contact CX-O-2798 “Carmichael” or any certified pilot trainer

- **RTO Training Notes**

- Set LR to different ears if you will be on multiple LR Frequencies
- Accessed by Alt+P and to set to different ears click STO
- Radio Etiquette - Let others finish what they have to say, DO NOT USE OVER AND OUT USE ONE OR THE OTHER BUT NOT BOTH TOGETHER
- **Important terms**
- Lima Charlie - Loud and Clear

- Say Again - Repeat Message
- Repeat Last - Repeat last FIRE mission
- Over - Message done, want a response
- Out - Message done, don't want a response
- Wilco - Will Comply
- Good Readback/Readback Correct - Info sent back to you is correct
- Break, Break, Break - Used in emergency situations
- Wave-off - Tells X-Ray to go away
- **Radio Messages/formats** - For CAS, MEDEVAC you can self-interact and go to cue cards for 5-Liner FAC and MEDEVAC. To call in artillery give callsign, warning order (Adjust fire, Fire for Effect, Suppress, Immediate Suppression/Smoke), location of target, description of target
- Critical Transmissions
- MASCAS - Many people are dead, dying, or soon to be dead
- Broken Arrow - Calls cas on a troopers location, chance to kill friendlies, works like cas request but Broken Arrow must be called 3 times before doing the CAS request

- **Squad Leading Training Notes**

- **Differences Between RC and ARC specialists (Medics, demos, other roles)**
- Medic - ARC - Field Surgeon RC - Enhanced Combat Medic
- Demo - ARC - Explosive Specialist RC - Demolitionist
- Sniper/Marksman - ARC - Recon Sniper (gets verpine) RC - Scout Sniper (gets DC-15x)
- Exotic weapons - ARC gets EPL-2 RC gets flamethrower
- Specialist roles - ARC - Fire support RC - Advanced Weapons, CQC Specialist, SL (gets RD-4)
- **Planning: Questions to consider**
- What is the Objective?
- What are the obstacles in the way?
- How can you overcome these obstacles?
- Am I well equipped to deal with this situation?
- Did I overlook anything?
- Communication is important
- **Contingencies**
- Troopers MIA
- Compromised Comms
- Emergency Beacon
- **Succession of Command**
- 1. Platoon CO
- 2. Platoon XO
- 3. 1st squad lead (Ex. Charlie 1)
- 4. 2nd squad lead
- 5. 3rd squad lead
- 6. 4th squad lead

- **Platoon Leading Training Notes**

- **Conduct** - Be respectful, act in a manner that positively reflects the unit, do not disobey direct orders, do not cause drama, and do not antagonise any member, squad, or platoon under your command.

- **Leadership types**
- Directing - Gives detailed instructions on how to do things
- Participating - Asking for input but making the final decision
- Delegating- Delegating responsibilities to different members/staff at your disposal
- Transformational - Focuses on empowerment and motivation and justifies the choices you make
- **Roles and Responsibilities of a Plt CO & XO**
- CO - coordinates squads, supervises execution of mission, guides the platoon's fight, allow SQLs to make their own solutions (communicate mission intent), use PSG to lighten workload, give feedback to Company, asks for Company feedback if unsure of a specific action, monitors LR 45
- Plt XO - Searches for ways to help CO, leads the Plt if CO is not at op or incapacitated, monitors LR 46 and coordinates with supporting elements
- Be sure to utilise other detachments like Covert Ops, X-Ray, and Field Support to provide resupplies or to help support the platoon.
- Know the contingencies in SQL training
- **Differences between ARC and RC Squads Gameplay**
- ARC Squads - These squads are far more versatile in how they can operate. Whether you need medics, demos, recon they can do it all and are often called scalpels in comparison to RC squads. ARC squads are ideally ahead of a movement providing recon and not actively engaging a target or base until they can get support.
- RC Squads - Unlike ARC squads, RC squads are specialised in what they can do and are less versatile. However, RCs can absorb much more punishment and they can be used to deliver a heavy blow. RC squads are ideally the spearhead of an assault are often called hammers because they are meant for one thing and one thing only.
- **Succession of Command on Company level**
- **Company**
- 1. Company Commander
- 2. Company Executive Officer
- 3. Senior Platoon Lead
- 4. Junior Platoon Lead
- 5. Field Support Lead
- 6. Aviation Lead
- 7. Covert-Ops Lead
- **Platoon**
- 1. Platoon Commander
- 2. Platoon Executive Officer
- 3. 1st Squad Leader
- 4. 2nd Squad Leader
- 5. 3rd Squad Leader
- 6. 4th Squad Leader
- **Squad**
- 1. Squad Leader
- 2. Fireteam Leader/2IC
- 3. Rifleman
- 4. Medic

- Shadow Training Notes

- Shadow Troopers specialise in ambush tactics and rapid hit-and-run engagements.
- Ethical guidelines mandate fair play and prohibit abuse of abilities.

- ➢ Unique equipment includes DC-19 blasters with Stealth and Remote Injection Rounds, Technician's Datapad for hacking, and Mercenary Disguise Kits.
- ➢ Ambush tactics involve covert approaches, target prioritisation, and coordinated hacking and assault.
- ➢ Movement prioritises stealth, with troopers staying crouched and using overwatch positions for reconnaissance.
- ➢ Exfiltration routes are planned post-objective completion.
- ➢ Success relies on strategic planning, precise execution, and adherence to ethical guidelines.

- **Tech Training Notes**

➢ **Equipment** (binds are found within MokTech Industries Core)
➢ Technicians Datapad - primary tool allows you to perform basic tech duties
➢ Shadow Technicians Datapad - Improved datapad with an expanded list of hacks
➢ Shadow Antenna - Reserved for Shadow Troopers, can be placed and interacted with to enhance the range and power of the user's hacks
➢ Computer Spike - Alternative method for some hacking but is limited in its hacking (can be carried by non-techs check kit guide)
➢ Prowler-500 (Packed)
A recon drone capable of being flown into the air.

➢ **Hacks**
➢ Droid Hack - Hacks a single droid and causes the droid to switch sides, if the hack fails the user suffers heart failure due to droid short circuiting. Range- in front of user
➢ Droid wave - User is able to send out a signal in a short radius around them causing 5 (15 with antenna) droids to switch sides and operate with the user for 30 seconds. If the hack fails droids will know the exact location of the user and run at them. Range 100-250 metres
➢ Droid Stop - User sends out a signal that causes all nearby droids to stop fighting for 30 seconds. If a hack fails droids will know the location of the user and hunt them down. Range 100-250 metres
➢ Droid Flee - Causes droids to run until they are 100 metres away from the hacker. If the hack fails droids will know the exact location of the user and run at them. Range 100-250 metres
➢ Droid Disrupt - User sends out a signal that disrupts the droids' accuracy to significantly drop for 30 seconds. If the hack fails the droids will receive a large boost in skill. Range 100-250 metres
➢ Mine Disable - Disables mines close to a user for two minutes. If the hack fails the minefield instantly detonates. Range 100-250 metres
➢ Hack Remote - Takes control of a single droid for 90 seconds, if the droid shoots its gun it becomes hostile to the other droids and if the hack fails the droid short circuits and stops the hacker's heart. Range 100-250 metres
➢ **Turrets**
➢ Blaster Turret (Packed)
A placeable blaster turret which will engage any OPFOR targets.

➢ Auto Turret (Packed)
A throwable auto turret which will engage any OPFOR targets.

MSE-6

- MSE-6 (Packed)
  The MSE-6 (Packed) is the item that allows the deployment of an MSE-6 droid.

- UAV Terminal (NATO)
  The UAV terminal is required to control the MSE-6

- Droid Caller
  The Droid called is the piece of equipment required to activate and deactivate the MSE.

- Maintenance Kit
  The Maintenance kit is a piece of equipment that allows the user to remove the fuse and change the selected fuses.

- MSE-6 Series Manual
  The Operations Manual will appear next to the fuse panel to assist the user with their selections.

    - MSE Modes

        - Payload Type
        - The payload type is what kind of reaction the MSE will have should it detonate.
        - SAFE - The MSE will not explode.
        - RANDOM - The MSE will randomly select between EMP or EXPLOSIVE.
        - EMP - The MSE will release an EMP explosion.
        - EXPLOSIVE - The MSE will release a normal explosion.

        - Operation Type
        - The operation type is to determine what kind of function the MSE will serve.
        - SURVEILLANCE - The MSE will be used for recon, using only its driving functionalities.
        - COURIER - The MSE will be used to deliver small objects, the user will be able to insert small items into the MSE
        - DEMINING - The MSE will be used to deliver an explosive payload, the user will be able to detonate the MSE on command.

        - Data Protection Mode
        - The MSE has a built in Data Protection protocol to avoid information falling into the wrong hands.
        - ON HIT - If the MSE takes any amount of damage, the MSE will detonate.
        - ON IMMOBILIZED - If the MSE becomes immobilised, the MSE will detonate.

- Relations Type
- The Relations type is what side the droid will be on in Arma 3. It's recommended to use the side of the enemy to avoid the droid from being shot.
- RETAINER - The MSE will be on the side of the user.
- OPFOR - The MSE will be on the OPFOR side.
- BLUFOR - The MSE will be on the BLUFOR side.
- INDEP - The MSE will be on the INDEP side.

- **How To Use MSE**

  -Talk to Arcanist
